

What is Splunk4Industry? Splunk4Industry workshops are a great opportunity for you to discover the value of Splunk using industry-aligned use cases, in a matter of hours. Attendees get an introduction to Splunk, along with hands-on experience of creating service monitoring across a number of FSI use cases.

Content: During the workshop we will walk you through a series of exercises designed to help you understand what Splunk is and how you can use it within your organisation. You will create your own service views built on KPIs and Health Scores, and both Business & Technical dashboards to provide holistic service insights.

Target Audience: These sessions are designed for Splunk beginners. Whether your organisation is just starting to consider using Splunk or you have just joined a team of Splunk users and need to understand the basics, “Splunk4Industry:FSI” is for you!

Prerequisites: None, other than an open mind and a willingness to learn!

Delivery Method: The next scheduled session will take place on Tuesday 17th October at 1pm, in Splunk's London (Paddington) Office. Drinks and snacks will be provided, plus an opportunity to network afterwards in Splunk's own pub "The Buttercup Arms".

Goals/Outcomes: Attendees will gain a good understanding of the value Splunk delivers in FSI, particularly in the areas of Payment, Financial Crime/Fraud and Critical Service Insights.

Duration: Workshops typically last around 3.5 hours

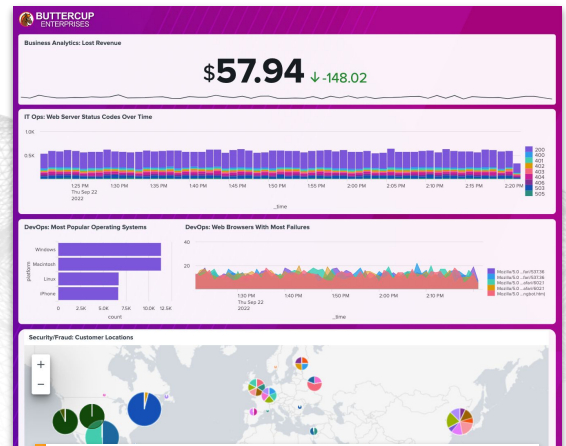

What Do I Need to Bring?

- A web browser with Internet access to connect to a Splunk server via port 443 (Test connectivity before the workshop here: <https://domain-test.splunk.show>.)
- A splunk.com account to login to the workshop environment (create an account [here](#)).

Go from messy machine data...

...to a dynamic, interactive dashboard!
