

# Splunk4Ninjas - Data Onboarding

Hands-on Splunk Workshop

**What is Splunk4Ninjas - Data Onboarding?** Splunk4Ninjas sessions are a great opportunity for you to discover the value of Splunk hands-on in a matter of hours. Attendees will get hands-on and perform data onboarding with Splunk. To include methods of bringing data in and custom data parsing to fit specific needs from unique datasets.

**Content:** During the workshop we will walk you through a series of exercises designed to help you understand how to onboard data into Splunk. Attendees will create their own Splunk add-on, add some data, map that data to specific fields, and then search and analyse that data using data models to populate a dashboard.

**Target Audience:** Sessions are designed for more advanced Splunk users. Ideal users have some experience with Splunk's Search Processing Language (SPL), and fundamentals of how you can query in Splunk. Does this sound like you? Great, Splunk4Ninjas is for you!

**Prerequisites:** Attendees should have a basic knowledge of the Splunk interface and understand key concepts such as indexes, sourcetypes and data models.

**Delivery Method:** Workshops are currently delivered both face to face and virtually, so anyone can join regardless of location! Ask your Splunk account manager for more information.

**Goals/Outcomes:** Attendees will bring data into an environment. Gain understanding of data parsing. Finally, ending with a real world example of how you can take data brought in, and modify it for a custom use cases.

**Duration:** Workshops typically last around 3 hours

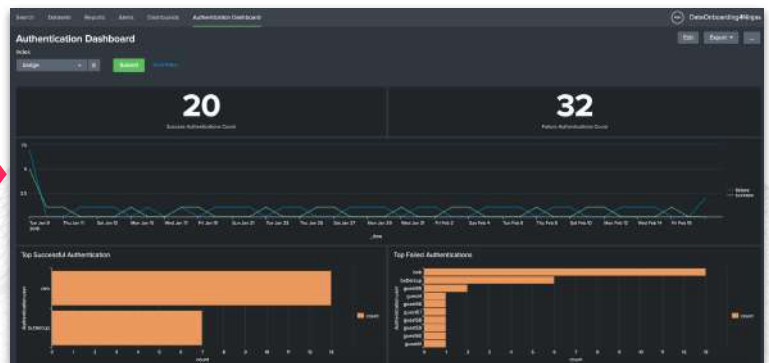

**What Do I Need to Bring?**

- A web browser with Internet access to connect to a Splunk server via port 443 (Test your connectivity here: <https://domain-test.splunk.show>.)
- A splunk.com account to login to the workshop environment - create an account [here](#).

Go from messy machine data...

...to a dynamic, interactive dashboard!
