Splunk4Industry

Manufacturing

What is Splunk4Industry? Splunk4Industry workshops are a great opportunity for you to discover the value of Splunk using industry-aligned use cases, in a matter of hours. Attendees get an introduction to Splunk, along with hands-on experience of creating service monitoring across a number of Manufacturing use cases.

Content: During the workshop we will walk you through a series of exercises designed to help you understand what Splunk is and how you can use it within your organisation. You will create your own service views built on KPIs and Health Scores, and both Business & Technical dashboards to provide holistic service insights.

Target Audience: These sessions are designed for Splunk beginners. Whether your organisation is just starting to consider using Splunk or you have just joined a team of Splunk users and need to understand the basics, "Splunk4Industry:Manufacturing" is for you!

Prerequisites: None, other than an open mind and a willingness to learn!

Delivery Method: Splunk4Industry events are currently delivered both face to face and virtually, so anyone can join regardless of location! Ask your Splunk account manager for more information.

Goals/Outcomes: Attendees will gain a good understanding of the value Splunk delivers in Manufacturing, particularly in the areas of Operational Resilience, Supply Chain and OT Cybersecurity.

Duration: Workshops typically last around 3.5 hours

What Do I Need to Bring?

- A web browser with Internet access to connect to a Splunk server via port 443 (Test connectivity before the workshop here: https://domain-test.splunk.show.)
- A splunk.com account to login to the workshop environment (create an account <u>here</u>).
