Splunk4Ninjas - SPL Best Practices

Splunk & Learn!

What is S4N SPL Best Practices? SPL best practices sessions are a great opportunity for you to deepen your existing Splunk skills in a matter of hours. Attendees gets lots of useful information including tips & tricks, best practices and practical examples on how to improve their SPL in our hands-on lab environment.

Content: During the session, we will show you how to write better and efficient searches. We'll share some useful tips & tricks, deal with complex data sets, different commands, macros, multi-value fields, regex and we will provide you with useful resources at the end of the session as well as cover Q&A.

Target Audience: Sessions are designed for experienced Splunk users looking to take their skills to the next level.

Prerequisites: Attendees should have a good understanding of Splunk fundamentals. Having experience with Splunk in a production environment will also come in handy!

Delivery Method: Delivered currently both face-to-face and virtually, so anyone can join regardless of location!

Goals/Outcomes: Attendees will gain advanced knowledge including best practices and practical guidance on how to optimize and improve their Splunk deployments.

Duration: The session typically last 3 hours but it can be adjusted to customer needs.

What Do I Need to Bring?
- A web browser with Internet access to connect to a Splunk server via port 443 (Test connectivity here: https://domain-test.splunk.show.)
- A splunk.com account to login to the workshop environment - create an account here.

Improve your SPL queries…

…to reach new speeds!
