

Master The Future of Data:

Splunk4Rookies – Platform AI Workshop

The AI revolution is here, but are you ready to operationalize it? The *Splunk AI Resilience Workshop* is an extensive, hands-on experience built to move your team from AI curiosity to enterprise-grade execution.

This session bridges the gap between cutting-edge AI innovation and your core data platform, ensuring you can harness the power of AI without intense training or deep subject matter expertise.

Here is what you will master:

Practical Understanding: You will gain fluency with how Splunk is approaching AI within the core platform, supporting you go from data to action on a path that suits you and your needs.

Operational Efficiency: You will learn how to leverage AI assistants inside of Splunk to slash development time, turning complex SPL challenges into streamlined, automated workflows.

Technical Proficiency: You will build live MCP server connections, giving you the hands-on experience needed to integrate AI directly into your existing architecture, allowing you to get insights from data inside Splunk using external AI assistants.

Business Impact: You will witness real-world demonstrations of business users querying massive cloud datasets through natural conversation, proving that data-driven decision-making can be accessible to everyone.

The Bottom Line

AI is transforming how we extract value from data, but bridging the gap between AI innovations and practical use can be a challenge. This workshop ensures you aren't just keeping up with the industry-you are setting the pace.

Ready to drive the next generation of data-driven decision-making?
